EDUCATION

Louisiana State University – Baton Rouge, Louisiana | Roger Hadfield Honors College **May 2027**

Bachelor of Science in Computer Science, Concentration: Data Science & Analytics

GPA: 3.49

Certifications: AWS Certified Solutions Architect - Associate (July 2026)

Relevant Coursework: Applied Deep Learning, Machine Learning and Data Analytics, Database Systems, Numerical Linear Algebra, Probability, Data Science and Analytics

EXPERIENCE

RoyOMartin | Information Systems Intern | Alexandria, Louisiana **June 2026 – Present**

- Built a C#/.NET MCP server that lets technicians manage helpdesk tickets in natural language from any device, resolving a vague description to the right ticket via subject, status, and text filters
- Replaced in-context base64 image transfer with a secure upload pipeline bound to Entra identity, cutting per-image context cost from >1M tokens (~\$1.17/MB) to a constant URL
- Drove an MQTT telemetry pipeline from approved SOW to deployment-ready, coordinating security, systems, and architecture reviews to land an edge computer-vision inspection stream in a SQL Server sink
- Designed two-node load-balanced ingestion within free-tier constraints and scaffolded DB logic modeling machine downtime as a gaps-and-aggregate-islands-over-noise problem to quantify its dollar cost

LSU College of Engineering | Undergraduate Researcher | Baton Rouge, Louisiana **January 2026 – June 2026**

- Built the evaluation harness for a study measuring whether LLMs adopt API edits (renamed functions, new return types or parameters) when generating code, reporting per-model adoption reliability and Pass@k generalization
- Parsed model outputs with Tree-sitter, scoring whether each generated call adopted the edited API

LSU College of Engineering | Junior Data Engineer | Baton Rouge, Louisiana **November 2025 – June 2026**

- Built SQL Server ELT pipeline that ingests legacy mainframe student records into a centralized, query-ready store
- Designed Kimball star-schema data warehouse powering Tableau dashboards that inform the College's course-planning and advising decisions
- Engineered T-SQL transform layer that deduplicates and standardizes records with window functions, preventing double-counted reporting metrics

Data Acquisition Lead | LSU Formula SAE | Baton Rouge, Louisiana **December 2025 – Present**

- Leading 8-member team building a vehicle telemetry and performance monitoring system, coordinating requirements across mechanical and electrical subsystems
- Built the PostgreSQL backend for the team portal, 10+ tables with Row-Level Security and a GitHub Actions plus Supabase CLI pipeline for versioned, automated migration deployment

Homeland Security | Emergency Management Intern | Hahnville, Louisiana **May 2025 – August 2025**

- Built automated regex-based ETL pipeline in Python (Pandas, NumPy) to analyze 24 years of flood reports, producing pivot tables, charts, and maps that identify high-risk zones for road-closure and pump planning
- Presented flood risk analysis to director and senior coordinators to inform \$3M East Bank Waterworks Project

PROJECTS

Peekbar | C++23, Win32

- Keeps minimized browser tabs glanceable in the taskbar gap; opens the chosen tab from click to window in under 100ms, from 539ms (5.7x), after an ETW profiler traced the delay to a UI Automation tree-walk

Tiger Racing Telemetry Pipeline | Python, TimescaleDB, FastAPI, Power BI

- Turns a Formula SAE car's raw AiM logs into a queryable warehouse and Power BI dashboard via an idempotent loader; flagged high-RPM oil starvation under cornering (a rod-bearing risk), cooling limits, and dead channels

STARfolio | C#/.NET 10, React, TypeScript, SQLite, Electron

- C#/.NET 10 MCP server exposing STAR-note, resume-tailoring, and mock-interview tools over an Obsidian-compatible vault; grounding and a citation hard-guard block invented facts and uncited claims
- Electron/React/TypeScript client on local SQLite consumes them for grounded STAR notes and mock interviews, refusing to confirm an entry until its decisions are justified

SKILLS

- Programming: Python (Pandas, NumPy, PyTorch, Tree-sitter), SQL (PL/SQL, T-SQL), C, Java, C#, JavaScript
- Databases & Warehousing: SQL Server, PostgreSQL, Oracle, MongoDB, TimescaleDB; ETL/ELT, Kimball star schema
- Tools & Cloud: AWS (RDS, S3), Azure, Docker, GitHub Actions, Claude Code, Tableau, Power BI
- Languages: English (Native), Spanish (Professional Working Fluency), Mandarin (Professional Working Fluency)
